

Physical and Chemical Changes

Flowering

Place – Near the Home

Physical and Chemical process.

The flowering period is the process of sexual reproduction of plants, which begins with the growth of flowers in the bud, followed by their appearance, pollination and flowering, resulting in the formation of seeds and fruits.

Photosynthesis

- Place – Near the home
- Chemical process.
- Sunlight hits the leaf and the chlorophyll produces oxygen.

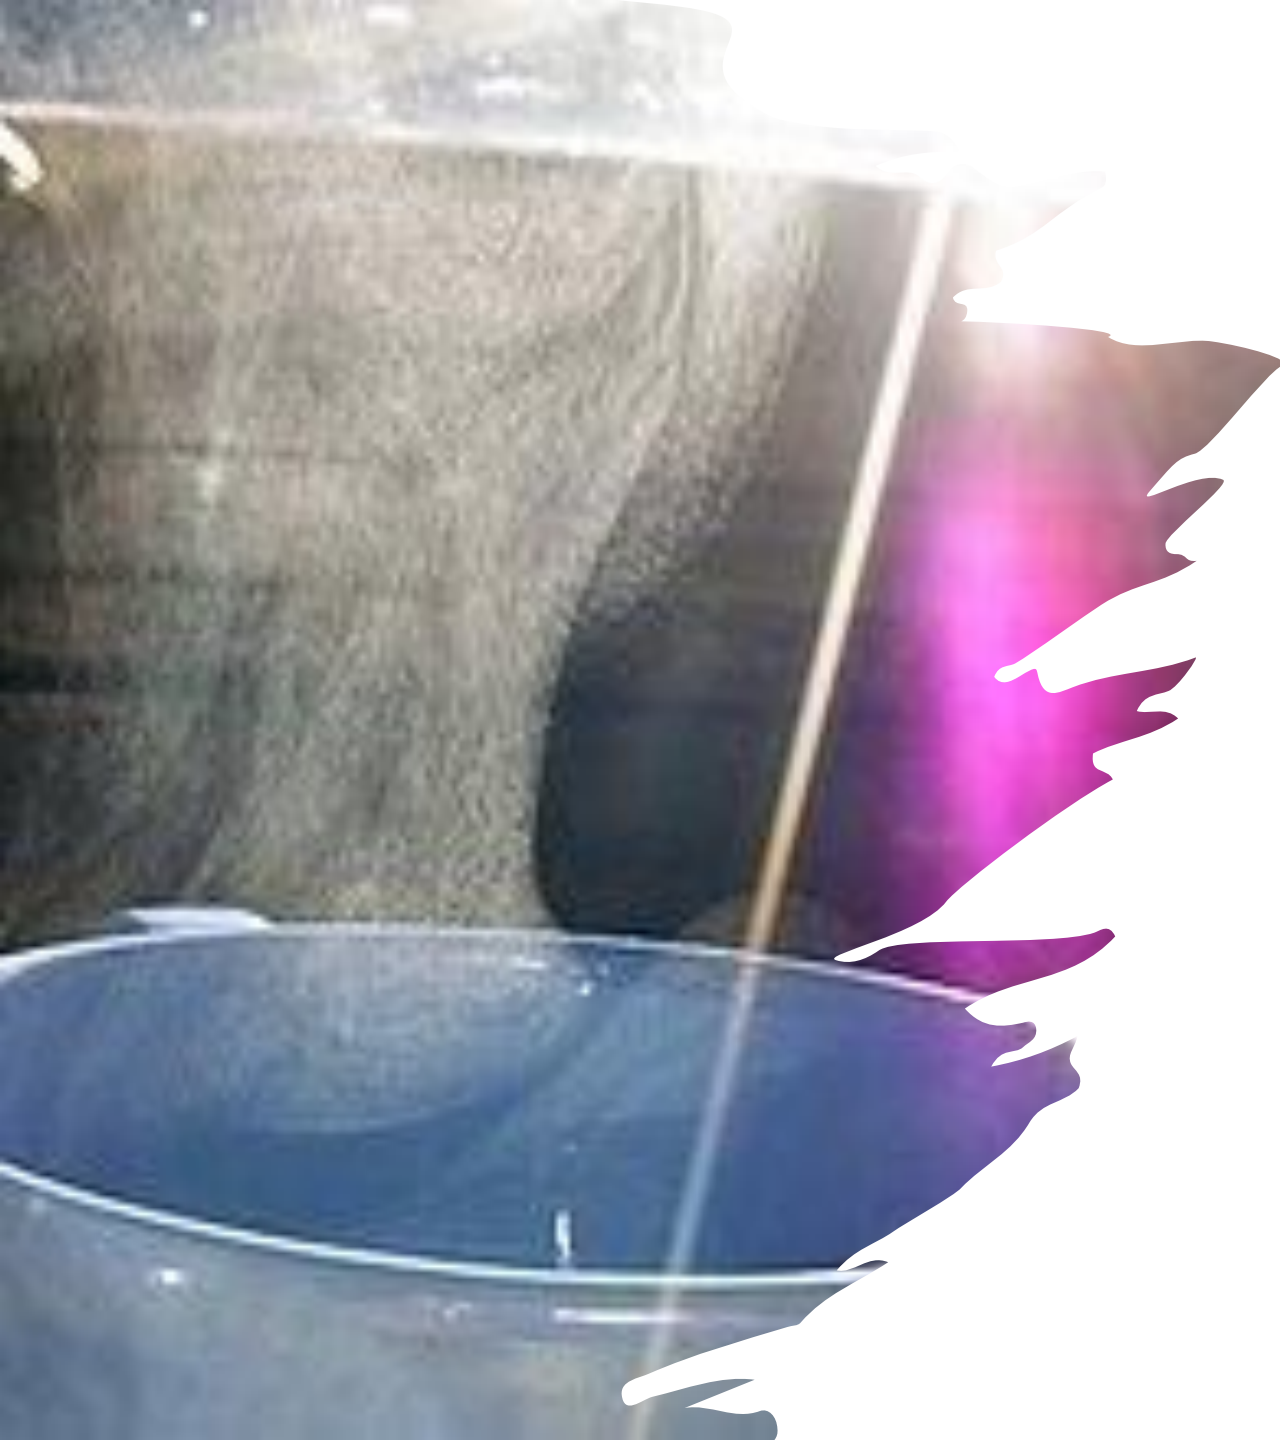

Melting

Place – Near the home

Physical process.

Under the influence of heat,
the ice melts.

Water evaporation

- Place – Near the Home
- Physical process.
- When the water heats up some of it turns into steam.

Air heating

- Place – Near the home
- Physical process.
- In spring, the sun approaches Slovakia and warms the air
